

## 书面作业6.1

### 第1部分 基础

### 第2部分 理论

T1 实数集 $R$ 上的二元运算 $*$ :  $a*b=a+b-a \circ b$ ,  $+$ 、 $-$ 、 $\circ$  为一般的加法、减法、乘法运算, 请问代数结构 $\langle R; * \rangle$ 是否有单位元、零元与幂等元, 如果有单位元, 哪些元素有逆元?

T2 证明: 有限半群存在幂等元.

提示: 注意元素“有限”、“结合律”, 则可以构造出元素相等关系, 从而可以进一步构造出幂等元.

T3 设 $h$ 是代数结构 $V_1=\langle S; \circ \rangle$ 到 $V_2=\langle S'; \circ' \rangle$ 的同态映射,  $h$ 的同态像为 $h(S) \subseteq S'$ , 证明:

(1)  $\langle h(S); \circ' \rangle$ 为 $V_2$ 的子代数;

(2)  $h$ 是 $V_1$ 到 $\langle h(S); \circ' \rangle$ 的满同态映射;

(3) 如果 $V_1$ 关于运算 $\circ$ 有单位元 $e$ 或零元 $z$ , 则同态像 $h(S)$ 中有关于 $\circ'$ 的单位元 $h(e)$ 或零元 $h(z)$ .

T4 设 $f, g$ 都是 $\langle S; * \rangle$ 到 $\langle S'; *' \rangle$ 的同态, 并且 $*$ 运算均满足交换律和结合律, 证明: 如下定义的函数 $h$ :

$S \rightarrow S'$ :  $h(x)=f(x)*'g(x)$ 是 $\langle S; * \rangle$ 到 $\langle S'; *' \rangle$ 的同态.

T5 给定代数结构  $A=\langle X; \circ \rangle$ 、 $B=\langle Y; * \rangle$  和  $C=\langle Z; \times \rangle$ . 设  $f: X \rightarrow Y$  是从 $A$ 到 $B$ 的同态, 且  $g: Y \rightarrow Z$  是从 $B$ 到 $C$ 的同态, 试证明 $g \circ f: X \rightarrow Z$ 必定是从 $A$ 到 $C$ 的同态,  $g \circ f$ 为函数 $f, g$ 的复合.

T6 复数的加、乘运算可以转换为矩阵的加、乘运算, 请从代数结构同构的角度进行证明.

提示: 设复数的集合  $C=\{a+bi | a+bi \text{ 为复数}, a, b \in R\}$ , 相应地可以定义  $2 \times 2$  矩阵集合:

$$M=\left\{ \begin{bmatrix} a & b \\ -b & a \end{bmatrix} \mid a, b \in R \right\}.$$

T7 代数结构间的同构关系是等价关系.

T8 已知代数结构 $\langle Z; + \rangle$ 以及 $\langle C; +_3 \rangle$ , 其中,  $Z$ 为整数集合,  $C=\{0, 1, 2\}$ .  $+$ ,  $+_3$ 为 $Z$ 、 $C$ 上的一般加法、加模3运算. 请定义 $\langle Z; + \rangle$ 到 $\langle C; +_3 \rangle$ 的同态映射 $\phi$ , 并按照同态基本定理, 构造相应同态三角形, 并给出解释.

T9 If  $\langle A; + \rangle$  is an algebraic structure, where the binary operation  $+$  is associative, and  $\langle A; + \rangle$  has an identity, and its element has an inverse, then  $\langle A; + \rangle$  is called a group(群).

A ring(环) is an algebra with the structure  $\langle A; +, * \rangle$ , where  $\langle A; + \rangle$  is a commutative group(交换群, i.e.,  $\langle A; + \rangle$  is a group and the operation  $+$  is commutative),  $\langle A; * \rangle$  is a monoid(独异点/单位半群), and the operation  $*$  distributes over  $+$  from the left and the right (即 $*$ 对 $+$ 满足左/右分配律).

If  $\langle A; +, * \rangle$  is a ring with the additional property that  $\langle A - \{0\}; * \rangle$  is a commutative group, then it's called a field(域). Finite field, also known as Galois Field(named after Evariste Galois), refers to a field in which there exists finitely many elements. The most popular and widely used application of Galois Field is in Cryptography(密码学). Since each byte of data are represented as a vector in a finite field, encryption and decryption(加密与解密) using mathematical arithmetic is very straightforward and is easily manipulable.

Now, let  $N_5 = \{0, 1, 2, 3, 4\}$ , and let  $+_5$  and  $*_5$  be the two operations of addition mod 5(加模5求余) and multiplication mod 5(乘模5求余), respectively. Please show that  $\langle N_5; +_5, *_5 \rangle$  is a field.

T10 (定义满足某些性质的二元运算) Let  $A = \{a, b\}$ . For each of the following problems, find an operation table satisfying the given condition for a binary operation  $\circ$  on  $A$ .

a.  $\langle A; \circ \rangle$  is a group(群的定义请参考 T8).

b.  $\langle A; \circ \rangle$  is a monoid but not a group.

c.  $\langle A; \circ \rangle$  is a semigroup(半群) but not a monoid.

**T11** Show that there is an epimorphism(满同态) between the set  $B$  of binary numerals(二进制数) with the usual binary addition(一般二进制加法) defined on  $B$  and the set  $N$  of natural numbers with the usual addition on  $N$ . (提示: 注意到二进制与十进制之间的对应关系)

**T12** Find the three homomorphisms(定义 3 个同态映射) that exist from the algebra  $\langle N_3; +_3 \rangle$  to the algebra  $\langle N_6; +_6 \rangle$  where  $+$  is the operation of addition mod 3 or 6. (提示:  $+_3, +_6$  是加模 3, 加模 6 运算, 注意定义需要满足同态方程)

**T13** Suppose we need a function  $f: N_8 \rightarrow N_8$  with the property that  $f(1) = 3$ ; and also,  $f$  must be a homomorphism(同态) from the algebra  $\langle N_8; +_8 \rangle$  to itself, where  $+$  is the operation of addition mod 8. Please finish the definition of  $f$ . (提示: 利用需要满足的同态方程来定义)

### 第3部分 综合应用
